Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1 : Coding

#### 1. Problem Statement

Ravi is developing a student registration system for a college. To efficiently store and manage the student IDs, he decides to implement a doubly linked list where each node represents a student's ID.

In this system, each student's ID is stored sequentially, and the system needs to display all registered student IDs in the order they were entered.

Implement a program that creates a doubly linked list, inserts student IDs, and displays them in the same order.

## **Input Format**

The first line contains an integer N the number of student IDs.

The second line contains N space-separated integers representing the student IDs.

### **Output Format**

The output should display the single line containing N space-separated integers representing the student IDs stored in the doubly linked list.

Refer to the sample output for formatting specifications.

#### Sample Test Case

```
Input: 5
10 20 30 40 50
Output: 10 20 30 40 50
Answer
// You are using GCC
#include<stdio.h>
#include<stdlib.h>
struct node{
  int id:
  struct node*prev;
  struct node*next;};
  struct node*head=NULL;
  struct node*tail=NULL;
void insert(int id){
    struct node*nnode = (struct node*)malloc(sizeof(node));
    nnode->id=id;
    nnode->next=NULL;
    if(head == NULL)
      nnode->prev=NULL;
      head=nnode;
      tail=nnode; }else{
      tail->next=nnode;
      nnode->prev=tail;
     Stail=nnode:
    void display()
```

```
struct node*temp=head;
while(temp!=NULL)
{
    printf("%d ",temp->id);
    temp=temp->next;}
    printf("\n");}
    int main()
{
        int N,id;
        scanf("%d",&N);
        for(int i=0;i<N,i++)
        {
            scanf("%d",&id);
            insert(id);
        }
        display();
        return 0;
}</pre>
```

Status: Correct Marks: 10/10
